5. Taylor and Laurent series Complex sequences and series

5 Taylor and Laurent series Complex sequences and series An infinite sequence of complex numbers, denoted by $\{z_n\}$, can be considered as a

function defined on a set of positive integers into the unextended complex plane For example, we take $z_n = n + 1 + 2n$ so that the complex sequence is $\{z_n\} = \{1 + i, 2 + i, 2, 3 + i, 2, 3, \dots\}$

Lecture Notes for Complex Analysis - LSU Mathematics

Lecture Notes for Complex Analysis Frank Neubrandner Fall 2003 Analysis does not owe its really significant successes of the last century to any mysterious use of $\sqrt{-1}$, but to the quite natural circumstance that one has infinitely more freedom of mathematical movement if he lets quantities vary in a plane instead of only on a line Leopold

Chapter 2 Complex Analysis - School of Mathematics

complex numbers, here denoted C , including the basic algebraic operations with complex numbers as well as the geometric representation of complex numbers in the euclidean plane We will therefore without further explanation view a complex number $x+iy \in C$ as representing a point or a vector (x,y) in R^2 , and according to

COMPLEX ANALYSIS - LTH

4 1 COMPLEX FUNCTIONS Exercise 18 Consider the set of symbols $x+iy+ju+kv$, where x, y, u and v are real numbers, and the symbols i, j, k satisfy $i^2 = j^2 = k^2 = -1, ij = ji = k, jk = ikj = i$ and $ki = iik = j$ Show that using these relations and calculating with the same formal rules as in dealing with real numbers, we obtain a skewfield; this is the set

Build a sequence of numbers in the following fashion Let the first two numbers of the sequence be 1 and let the third number be $1 + 1 = 2$ The fourth number in the sequence will be $1 + 2 = 3$ and the fifth number is $2 + 3 = 5$ To continue the sequence, we look for the previous two terms and add them together So the first ten terms of the
