PRINCIPLES OF PALEONTOLOGY

Paleontology is considered a subdiscipline of geology, and as such, students will develop a basic understanding of fundamental principles of geology. The fossil record will be used to refine these principles. There will be at least one, if not two, field trips wherein students will be able to see fossils in their "natural environment".

Invertebrate Paleontology - Cornell College

Foote and Miller (in Principles of Paleontology) Not all organisms leave behind fossilized remains after they die, and even if they do, those remains are nearly always altered in some way. Understanding the modes of fossil preservation (taphonomy) allows us to make inferences about the environments in which these organisms lived and to

David M. Raup - National Academy of Sciences

David M Raup, one of the most influential paleontologists of the second half of the 20th century, infused the field with concepts from modern biology and established several major lines of research that continue today: Theoretical morphology Why, despite eons of evolution, is the spectrum of ...
